## Career Objective

I am deeply passionate about **web development**. I dream of being an expert web developer so that I can build professional & helpful web application that has **business** value. I have **1+ years** of experience in **Web** Development as a **front-end** and basic **back-end** developer. I am skilled in a range of programming languages, platforms and some frameworks including **JavaScript, React, Tailwind, MongoDB, and Nodejs**.

## Skills

**Front-End:** React.JS, JavaScript, TailwindCSS, HTML, CSS

**Back-End:** Express.Js, JavaScript, Firebase for authentication

**Database:** MongoDB

**Tools:** Git, GitHub, Netlify, Vercel, VSCode, Chrome Dev Tools, Npm, Figma

## Projects

### 1. Blood Bucket (December, 2023)

[Live site](#) | [Client side](#) | [Server side](#)

**Overview:** Created a website for blood donation using React. User can post blood donation request and can see other peoples posted requests. If a user wants to donate blood, he can easily confirm the donation request.

**Technologies:** React, Tailwind, Express.js, Nodejs, MongoDB

**Admin:** email- abcd@gmail.com, pass- abcd1234@

#### Features:

- Blog posting by admins
- Functional contact section in home page
- Admin control

### 2. Home Healers (November, 2023)

[Live site](#) | [Client side](#) | [Server side](#)

**Overview:** Created a website for home repairing services using React. User can post home repairing services here and get services from here. User can see his bookings, his posted services and can manage the status of his pending works.

**Technologies:** React, Tailwind, Firebase, Express.js, Nodejs, MongoDB

#### Features:

- Services searching functionality
- Providers control in pending work
- Google login

### 3. TechTrove (November, 2023)

[Live site](#) | [Client side](#) | [Server side](#)

**Overview:** A website for tech products, created using React. User can see some brands in the home page. By clicking on a brand they will be redirected to a product page and see all products of that brand. They can add products to their cart. Also they can remove products from their cart

**Technologies:** React, Tailwind, Firebase, MongoDB

#### Features:

- Dark mode in all pages
- Users can add products to cart
- Toast notification

## Experience

Specializing in React for dynamic front-end interfaces, JavaScript for robust scripting, Node.js for efficient server-side operations, and MongoDB for scalable database management. Proven ability to design and implement responsive, user-centric applications, with a keen focus on optimizing performance and functionality.

## Education

**Dhaka Imperial College (2023-2024) - Present**

Higher School Certificate (H.S.C)

Business Studies
